

Get paid on sign-off. *Or on silence.*

still (German): quiet. **still** (English): even so.
If your client stays still, you still get paid.

Delivered. Invoiced. *Waiting.*

Day 47

Re: Invoice 2026-081

"Still have to look at it.
I'll get back to you."

The work is submitted, the client goes quiet, and the freelancer chases the money for weeks. Across borders it gets worse:

SWIFT FEES

DAYS IN TRANSIT

10-20 % MARKETPLACE FEE

"PAY FIRST" VS. "DELIVER FIRST"

The rule already exists. *Just not without a middleman.*

Deemed acceptance • § 640 (2) BGB, contracts for work

Silence past a deadline you set counts as acceptance, unless the client names a defect.

But nothing pays out automatically. The money still sits with the client, and the freelancer still has to chase it, or sue.

Marketplaces

Upwork and Fiverr auto-release after 3–14 days.

But only inside their marketplace, for 10–20 %, with them holding the money. Not for clients you found yourself.

Stillpaid brings **optimistic payments** to client work: final unless the client objects in time. The money is locked before work starts, and silence releases it.

Milestone escrow, *with a clock.*

1 • Fund

Money first

The client funds each milestone in USDC.
Held by the program in that milestone's own vault, not by us.

2 • Submit

Deliver

Link and note. Their SHA-256 fingerprint goes on-chain, so any later edit shows.

3 • Review

Silent Yes

Approve, send a change request, or dispute. Silence past the review deadline: the freelancer is paid.

4 • Disagree?

Split, arbiter, default

An agreed split, a named arbiter, or the default split both sides accepted up front.

Nobody needs to press a button.

After the review deadline, **anyone** can release the milestone to the freelancer. Our crank does it within half a minute, but the freelancer needs neither the client nor our server.

If the client stays silent, the
freelancer gets 25 USDC in

01:30

SILENT YES: PAID

Clients keep the full review. *They just can't ghost.*

1 • Negotiate

Offer a split

One side offers e.g. 60/40; the other accepts *exactly* that offer. A changed offer can't be accepted by accident.

2 • Arbiter

A person both trust

Optional, named when the job is created. Decides only after the negotiation window.

3 • Default split

Agreed up front

Nobody decided in time? The default split from the terms applies. Anyone can trigger it.

- ✓ Client: money back before acceptance or on late delivery
- ✓ Client: the agreed number of change requests

- ✓ Freelancer: sees the money locked before starting
- ✓ Freelancer: a change request never shortens a deadline

Live on devnet. Try both sides.

Get paid on sign-off.
Or on silence.

Get paid on sign-off. Or on silence.

stillpaid.sorevo.de/demo, about five minutes, no SOL needed:

- ✓ Be the freelancer: a demo client funds 25 test USDC, you submit, silence pays you
- ✓ Be the client: the demo freelancer delivers in seconds; approve, request a change or dispute
- ✓ Throwaway demo wallet, or Phantom / Solflare on devnet
- ✓ Every step linked to its transaction

Trust the rules, *not a custodian*.

01

Nobody holds the money

Held by the program, not by us. Every payout follows the rules and happens once. Before mainnet, upgrades move to a public multisig.

02

Deadlines enforce themselves

Release on silence and the default split are permissionless: any wallet can trigger them, on Solana's clock.

03

Paid anywhere in seconds

USDC settles on-chain in seconds for a fraction of a cent. The app pays the fees, so users need no SOL.

04

Evidence both sides can check

Terms, deliveries and reasons are fingerprinted on-chain. The job page re-hashes every text and links every step.

Why not Upwork or Escrow.com?

	INVOICE + BANK	UPWORK / FIVERR	ESCROW.COM	CRYPTO ESCROW (E.G. KLEROS)	STILLPAID
Money locked before work	No	Yes	Yes	Yes	Yes
Paid when the client goes silent	No	In-platform only	Yes (auto-accept)	After a delivery deadline	Yes, on-chain
Clients you found yourself	Yes	Direct Contracts, ~5 %	Yes	Yes	Yes
When nobody agrees	Court	Platform decides	Agent decides	Paid jurors decide	Default split
Who holds the money	The client	The platform	A licensed agent	Varies	The program
Cost · payout	SWIFT, FX · days	up to 20 % · days	2.6 %, min. \$50 · days	Gas · seconds	planned 1 % · seconds

Typical setups, simplified

Start where both sides hold USDC.

First users

Crypto-native clients

Solana teams, DAOs and grant programs paying freelancers across borders. No more chasing sign-offs.

Then

Agencies hiring offshore

"The money is locked" as a perk to win good freelancers.

Later

EU clients

EURC, invoices with EUR amounts, embedded wallets and card top-ups.

Upwork alone moved **\$4B** of freelance work in 2025 at an **18.7 %** take rate. **10,000+** contractors already take stablecoin pay through Deel, including on Solana.

1 % of each payout.

Almost no cost per milestone.

Bottom-up

\$130k a year

if 5 % of Superteam Earn's 2,720+ sponsors pay 4 freelancer milestones of \$2,000 a month through Stillpaid.

Unit cost

under \$0.01

in network fees per milestone.
The account rent comes back when a settled milestone is closed.

Pricing

1 %, paid by the client

min. \$2, max. \$100, free in beta.
Upwork's take rate: 18.7 %.

Go to market: Superteam Earn sponsors and grant programs that already pay in milestones, then Squads-run teams and DAOs. Later: a flat fee per program, and paid expert arbiters.

Built, tested, live on devnet.

15

instructions in our own
Anchor program

65

program tests,
including every
deadline

34

end-to-end checks,
passing on devnet

0

SOL a user needs: the
app pays the fees

Program 2gbyeN1rQm2869HMK2mnSJyHc4cQfD1rAGh6dk5ccoVyg4 (devnet, verified build) · Solana Actions / Blinks · a Squads multisig can be the client · IDL on-chain · open source (Apache-2.0)

Silence *still* pays.

The ask: Solana teams and grant programs to run their next freelancer milestones through Stillpaid in a Q1 2027 mainnet pilot.
